Carbide Drill Promotion

Series 5510 3xD depth, coolant fed carbide

Series 5514 3xD depth, solid carbide

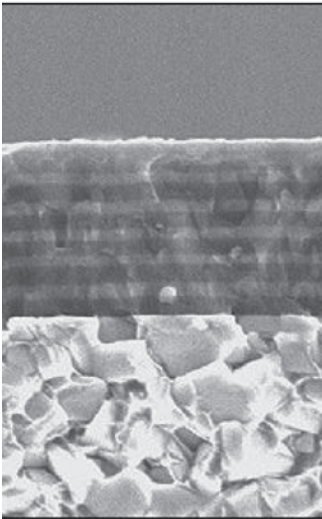

Series 5511 5xD depth, coolant fed carbide

Series 5515 5xD depth, solid carbide

Series 5512 7xD depth, coolant fed carbide

Self-centering point design
Works well as a pilot drill
Designed for high penetration rates

RT 100 U carbide drills feature FIREX® coating.

FIREX is a multi-layer coating that provides the perfect balance between shock- and heat-resistance.

This universal application coating was initially developed for dry machining but has since become one of the most popular heat resistant coatings. FIREX is a multi-layer combination of TiN and TiAlN coatings which provides thermal stability and wear resistance in a variety of applications.
